

Filtration

Centrifugal Concentrators, Vivaspin

Provide a single-step procedure for sample preparation, providing rapid sample filtration and concentration. Comprise centrifuge tube filter container with insert containing patented vertical membrane and thin channel filtration chamber. A wide choice of membrane materials is available for compatibility with most sample solutions, and low hold-up and dead-stop volumes ensure recoveries from small samples.

Additional features of Vivaspin 2

Unique to the Vivaspin 2, is the choice of directly pipetting the concentrate from the dead stop pocket built into the bottom of the concentrator, or alternatively reverse spinning into the concentrate recovery cap which can be sealed for storage. Both methods result in near total concentrate recoveries.

Vivaspin Concentrators

As described. Supplied in packs of 25 (except FC890-32 which is supplied in a pack of 12). Packs of 100 are also available – details on request.
