

Histology

Tissue-Wax

Tissue Embedding Wax, Tissue-Wax

A highly purified, filtered, white paraffin wax blended with synthetic polymers and suitable for routine embedding and sectioning applications. Offers very little shrinkage on cooling and high performance when sectioning, ease of cutting and ribbon continuity. Melting point 56-58°C, congealing point 54-57°C. Supplied in pelletised form within packs of 1kg.

HG385-15 Tissue-Wax

Tissue Embedding Wax, Tissue-Wax*

Similar to HG385-15 but with a small amount of Dimethyl Sulphoxide added to enhance tissue penetration, giving a shorter infiltration time. Also recommended for larger or harder tissue samples as it reduces brittleness of sections, enabling more flexible ribbons. Supplied in pelletised form within packs of 1kg.

HG385-25 Tissue-Wax*

Larger pack sizes are available - *details on request.*

Embedding Cassettes

Embedding Cassettes, Standard

Solvent-resistant polyoxymethylene (POM). Made to fit most commonly-used microtome chucks. Circular base perforations enhance adhesion of paraffin wax blocks to the cassette. Without cover, but with moulded lugs to accept accessory stainless steel covers. A 45° angled labelling area provides a comfortable writing surface and is suitable for most models of cassette labeller. Supplied in packs of 1000 (2 x bags of 500), in colours as indicated.
